

Bufotalin 当前全流程报告

SMILES intake -> ChemEnzy -> verifier -> literature/PDF -> guided rerun -> final verdict

Target profile

name: bufotalin

formula: C₂₆H₃₆O₆

exact MW: 444.251189

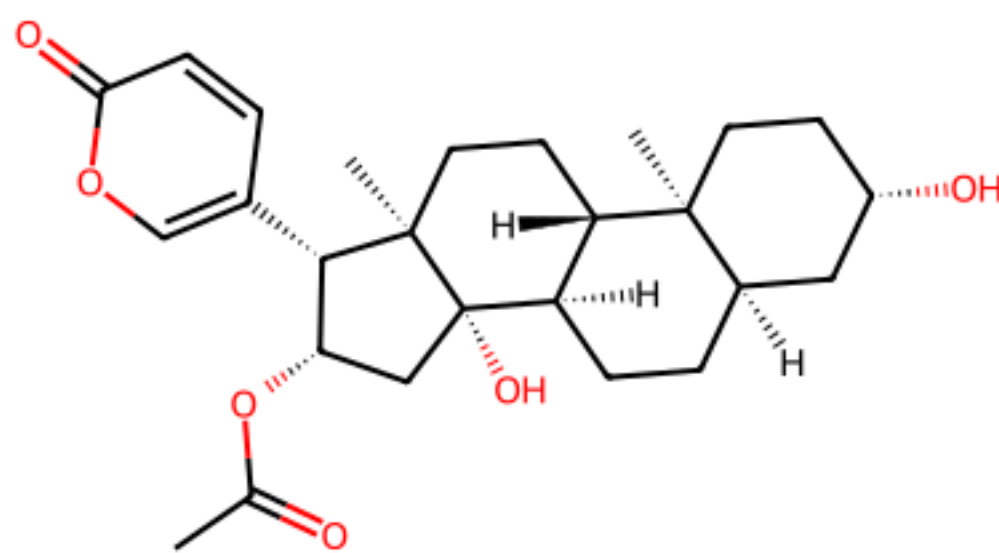

heavy atoms: 32

rings: 5

stereocenters: 9

InChIKey: VOZHMAYHYHEWBW-NVOOAVKYSA-N

risk flags: polycyclic_or_steroid_like

RDKit depiction from preflight isomeric SMILES

Final verdict

verdict: fake_closed_rejected

route_status: fake_closed_rejected

solved: False

stock_audit_passed: False

本次运行边界

Live planner was attempted first and rejected by schema validation: invalid_run_semantics.

The completed full tool run used the deterministic valid planner, but ChemEnzy, retrieval, open research, guided rerun, route expansion, and PDF queue were real tool executions.

No source full text, credentials, cookies, raw LLM reaction injection, or production KB writes are accepted as route evidence.

现在一个 SMILES 进来经历什么

Canonical controller contract

1. Target intake

Parse SMILES, canonical/isomeric SMILES, formula, rings, stereocenters, risk flags.

2. Workflow plan

Plan must validate strategy and run_semantics before tools execute.

3. Native ChemEnzy

Route generator only; raw solved is not final solved.

4. Route verifier

Checks target identity, stock closure, hidden non-stock leaves, atom jumps, advanced terminals.

5. Frontier/literature gate

If unresolved/fake/advanced, extract frontier and trigger literature/source-detail.

6. Open research/PDF

Typed retrieval, source access status, same-scope PDF fallback queue, no credential storage.

7. Guided rerun/expansion

Validated downstream handoff can guide ChemEnzy or child target search.

8. Self-evo staging

Target-run memory may stage candidates; production remains blocked.

9. Final verdict

Only deterministic bundle/verifier emits solved, partial, unresolved, or fake_closed_rejected.

Bufotalin 真实运行结果

ChemEnzy and downstream tools

Native ChemEnzy

elapsed_s: 288.13
raw/verifier route count: 179
verifier accepted routes: 0
verifier rejected routes: 179
route_status: fake_closed_rejected
...

SMILES-first + literature

route_status: partial_anchor
strategic evidence and route anchors were generated
target-as-frontier is tracked separately from route-failure frontier

Open research

tool_status: rejected
final_status: partial_handoff_ready
sources/excluded/search_log: 30 / 10 / 33
guided requests: 2
literature template cards: 6
extraction tasks: 16
...

Guided rerun + expansion

guided ChemEnzy elapsed_s: 284.494
guided reasons: advanced_same_scaffold_terminal,
large_atom_jump,
no_verifier_accepted_stock_closed_route
route expansion status: solved
accepted subgoals: 1 / 2
advanced_same_scaffold_terminal: accepted=False
status=fake_closed_rejected routes=137

Final deterministic verdict

verdict: fake_closed_rejected
route_status: fake_closed_rejected
solved: False
stock_audit_passed: False
reasons: advanced_same_scaffold_terminal, downstream_consumables_missing_evidence_refs:route_expansion_tasks:1,
fake_closure_evidence_present, large_atom_jump, no_verifier_accepted_stock_closed_route,
open_agent_boundary_violation:context_boundary:large_raw_artifact_dump, open_structure_research_nonzero_exit,
raw_reaction_injection, route_verifier_rejected_raw_routes

真实检索与 PDF fallback

Agent access first, then same-scope local PDF queue

Retrieval/source triage

sources: 30
excluded_sources: 10
search_log: 33
relation counts: exact_target=6, unusable=21,
close_analog=2, exact_intermediate=1

Local downloaded PDF

path:
/root/autodl-tmp/AutoPlanner/1-s2.0-S0040402025001668-main.pdf
exists: True
size_bytes: 878443
The report records the local PDF pointer but does not store source full text.

Queued PDF fallback requests

10.1016/j.tet.2025.134610 | scope=article | status=queued
10.1016/j.steroids.2024.109555 | scope=article | status=queued
10.1021/jo00934a013 | scope=article | status=queued

Source-detail policy

PDF fallback is only allowed after a same DOI/URL/source_ref and same content_scope agent-access row records metadata-only, login/paywall, or unavailable.
This run queued article-scope requests only after metadata-only source access rows existed.
Downloaded PDF content is not treated as route evidence until structured extraction produces source-grounded product/reactant SMILES.

Interpretation

This is a complete real tool-chain execution, but it is not a solved synthesis.

The strongest validated output is partial downstream handoff plus route-expansion evidence.

Blocking issues: exact source-detail route steps are still absent, open research had a boundary violation, and raw/guided ChemEnzy routes failed verifier gates.
